CUTRINE ULTRA (2.5 GALLON)

Citrine Ultra Aquatic Algaecide Herbicide is a chelated copper formulation containing an emulsified surfactant/penetrant combination for highly effective control of coarse (thick cell-walled) filamentous algae, musciaginous (colonial) planktonic algae, Chara and copper-sensitive vascular aquatic plants. Citrine Ultra Aquatic Algaecide Herbicide, under field conditions, controls mat-forming, filamentous forms such as Spirogyra, Cladophora, Hydrodictyon, Vaucheria, Ulothrix, and Lyngbya; planktonic cyanobacteria such as Anabaena, Aphanizomenon, Microcystis, Psuedoanabaena, Oscillatoria; and attached, bottom-growing forms such as Chara, Nitella, Gleotrichia. Citrine Ultra Algaecide Aquatic Herbicide has also been proven effective in controlling the rooted aquatic plant, Hydrilla verticillata, Egeria densa and other copper-sensitive species. The ethanolamines in Citrine Ultra Algaecide Aquatic Herbicide prevent the precipitation of copper with carbonates and bicarbonates in
